

I CLAIM:

1. A soap device comprising:

a sheet of flexible netting-like material including a plurality of perforations formed therein, and including an outer peripheral
5 portion, and

a soap material engaged into said perforations of said sheet of flexible netting-like material, and engaged onto said outer peripheral portion of said sheet of flexible netting-like material to form said soap device.

10 2. The soap device as claimed in claim 1 further comprising at least one second sheet of flexible netting-like material engaged into said soap material and superposed with said sheet of flexible netting-like material, and including an outer peripheral portion having said soap material provided thereon.
